Audit Claude's Context of You and Your Work in 15 Minutes

BEGINNER

CLAUDE

Audit Claude's Context of You and Your Work in 15 Minutes

Overview **Instructions** Your Instructor

The Rundown

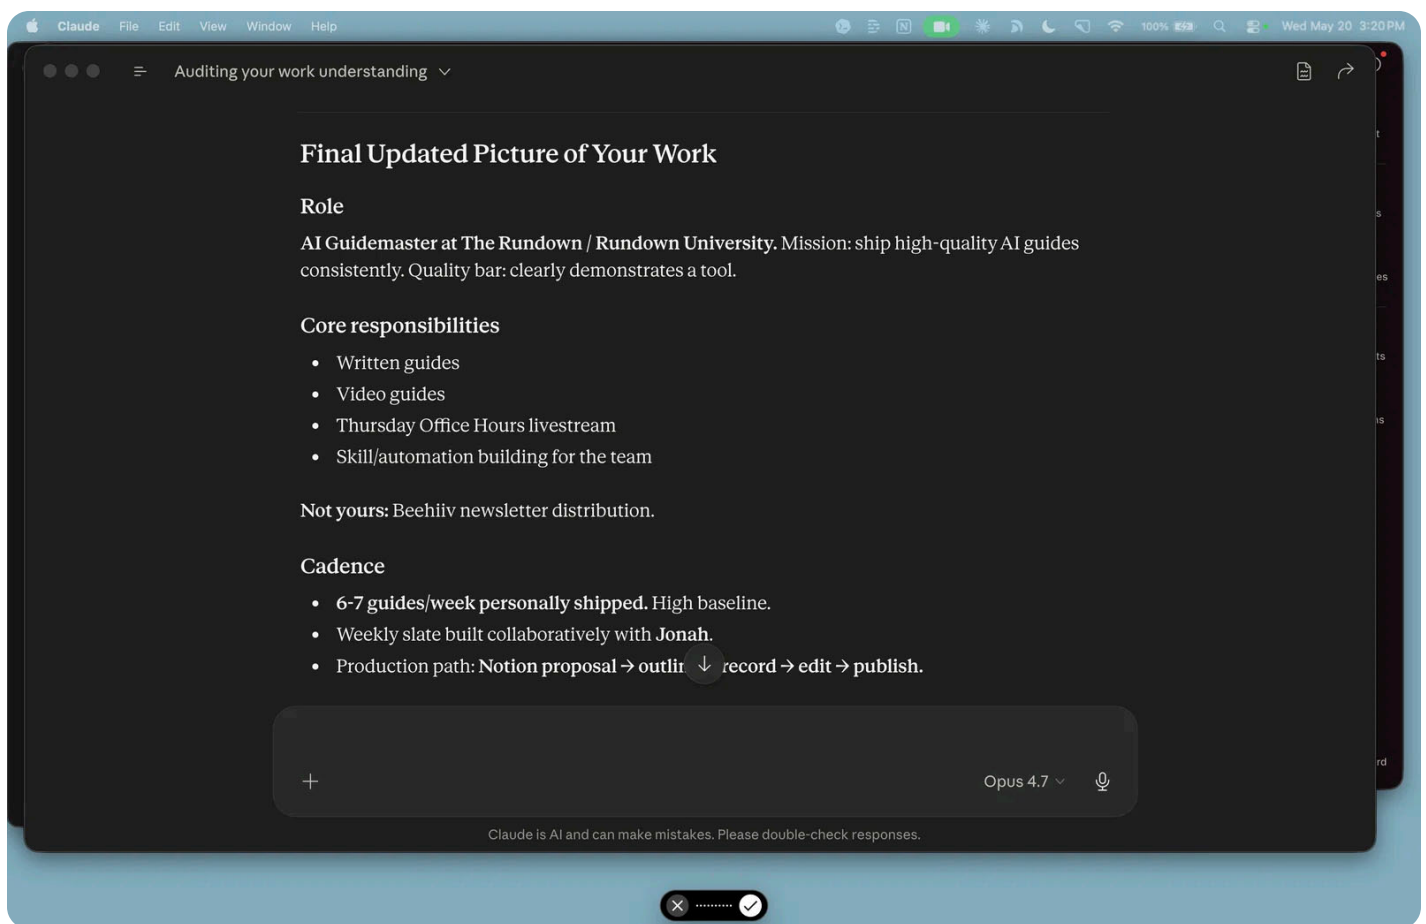

In this guide, you will learn how to audit Claude on what it thinks it knows about you and your work. Claude will interview you, clean up stale assumptions, update its memory, and create a report with recommendations for improving your AI workflow and work habits.

Mark as complete

NOT OLD CONTEXT.

AI power users who want a lightweight quarterly checkup for their role, KPIs, workflows, tools, and bottlenecks.

What You Will Build

You will build a work-context audit workflow that produces three useful outputs:

a table of Claude's assumptions about your role, priorities, KPIs, tools, and workflows

an updated picture of your current work context

a Markdown report with recommendations for what to automate, what skills to build, and what to cut

A major benefit of going through this process is that you will understand your own work process better

A Claude account

Enough Claude history or memory for Claude to have assumptions about your work

10-15 minutes to answer short interview questions

This guide uses Claude, but the same audit works in ChatGPT, OpenClaude, Claude Code, Claude Co-Work, or any other AI you use for real work.

Run the audit anywhere you do serious AI work, and save only stable work context instead of sensitive details or one-off project noise.
